ond green indicator light of the machine will be on, and the internal relay contact of the switch will be connected, that is, NO and COM are connected. After 0.5 seconds, the green indicator light will be off, and the internal relay contacts of the switch are disconnected, that is, NO and COM are disconnected. See the detailed operation of APP below for the method of access and user management for mobile phones.

7. Administrator's mobile operations

There can only be one administrator on this machine. Administrators must be added first, and then other users can be added by administrators. Administrator is added as follows:

1. Turn off the power supply of the machine and then turn it on again. Follow-up operation will be carried out within 10 minutes.
2. Open APP, the user instructions interface shown in Figure 1. After clicking on "Scan QR Code", a scanning window appears as shown in Figure 2, aiming at the QR code of the device on the product chassis. After a moment, the device interface shown in Figure 3 appears, that is, the addition is successful.

11. Common Questions

1. The user's QR code has been obtained from the administrator. Why can't you open the door? Bluetooth is not on or too far away from the device and the signal is too weak.

2. Need to suspend the use of a user, but do not want to delete the user, OK?

Just change the user's name, and when the original name is changed back, the user can open the door again.

3. Administrators can not enter the management user status, what is the reason?

The administrator is not near the device, or does not turn on Bluetooth, because the management user needs to operate online, and can only operate after connecting with the device.

4. Are there any security risks after the administrator leaves his post? Can he still open the door?

Don't worry at all, you can set up a new administrator, and must be re-energized within 10 minutes to operate, scan the QR code on the machine, after success, the original administrator automatically fails, will not open the door again.

5. Replacement of mobile phones or administrators, reinstall APP, the original user is lost?

No, because the user information is stored in the device. After entering the management user mode, APP will download the device data again, modify the user information or add new users. APP will always synchronize with the device.

6. Can the same cell phone operate multiple devices?

Yes, there are many different devices in the list of devices. You can open different doors by operating different buttons.
